

SYSTEM AND METHOD OF HANDLING AS A GENERIC MODE AN ASYNCHRONOUS WEBSERVICE CALL

ABSTRACT

A system for handling a web service call by clients in a communication network is disclosed. The system comprises a client requester for issuing client requests. The client requests may comprise at least one client request to call a web service. The system also comprises a callback web Service that is coupled to the client requester for registering the at least one client request to call a web service and for invoking the called web service. A response web service is coupled to the callback web service for receiving a response to the at least one client request to call a web service and is also coupled to the client requester for delivering the response when a client request to obtain the response is issued from the client requester.
